INNOVATION

THE TOTAL SOLUTION FOR INSTALLING SNAP-IN SENSORS!

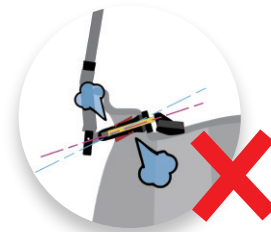

watch video

Choose Cobra 2K

With the new Cobra 2K, technicians can install sensors correctly and quickly by pushing the sensor body and screw head without damaging the rubber valve stem or valve core.

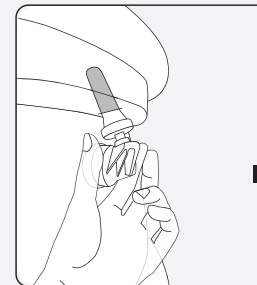

Stop using traditional tool

Auto manufactures report that 10–15% of snap-in valves will leak after installation even when proper procedures were followed. The traditional tool tears the rubber valve and you will not notice because the damage is so microscopic and is covered by the rim.

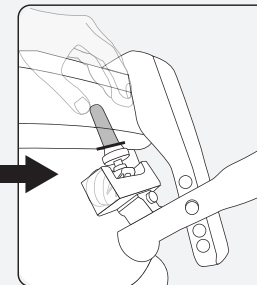

Don't worry about losing sensor valve cap

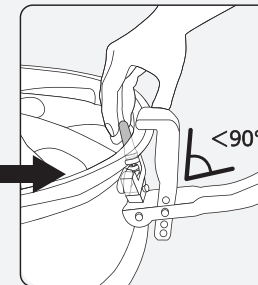

Technicians lost valve cap frequently because using traditional tool.

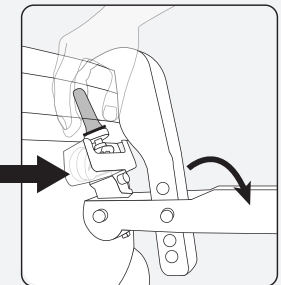

Input rubber valve stem into wheel

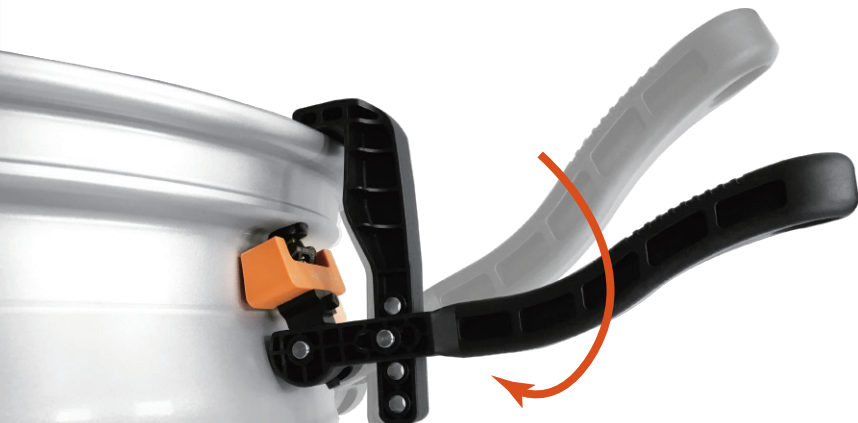

Mount sensor body by holder

Hold rubber valve stem and make sure angle is less than 90 degree

Hold rubber valve stem and pull handle to fit snap-in sensor

WORKS WITH MAJOR TPMS TOOLS

Once installed, just follow the OE-relearn procedure using any major TPMS programming tool.
